# 1.0 Project Initiation

## 1.1 Project Overview

The JU Library application is designed to provide a user-friendly experience for students, enhancing their library experience at the University of Jordan. Our app provide a simple interface through which students can easily search for the book that they want in the library and check its availability. Additionally, it provides library employees with functionalities to manage the library's book in the application by adding, deleting, and updating them. Moreover, students can see important library announcements and report any problem that faces them through the application. The JU Library application aims to improve communication between the library and students.

## 1.2 Problem Definition

### 1.2.1 Issues of The University of Jordan Library

- 1) The existing web-based search engine that is not user-friendly.
- 2) University does not have a platform to inform students about library opening and closing times. Students miss many announcements.
- 3) Student face challenges when seeking assistance or report a problem related to the library, leading to time wastage.
- 4) Students often forget the date and time they borrow the books.

### 1.2.2 Objectives

- 1) Create a user-friendly application where students can search for books easily and check availability.
- 2) Provide announcements section within the application, ensuing that students are informed with the important updates.
- 3) Provide a section where students can report a problem.
- 4) help students to keep track of their borrowing date and time.

### 1.2.3 Requirements

- 1) The system should be easy to use.
- 2) The system should be secure and reliable.
- 3) The system should be accessible for all of the users.

### 1.2.4 Constraints

- 1) System's development should not exceed 3/6/2023, considering the project's deadline.
- 2) Development team with limited expertise.

## 1.3 Solution Alternatives Feasibility Study

### 1.3.1 Technical Feasibility

We can use our skills and field of study by getting help from developers and programmers or IT staff in general who is experienced with flutter and dealing with database.

### 1.3.2 Operational Feasibility

Operational feasibility is a measure of how well a proposed system solves the problems and takes advantage of the opportunities identified during scope definition and how it satisfies the requirements identified in the requirements analysis phase of system development.

JU Library will be feasible because it will be available at all times and accessible from any location. Also, it meets the requirement of the system from ease of searching for books, book availability, receive announcements, and reporting a problem.

### 1.3.3 Economic Feasibility

The economic feasibility step of business development is that period during which a break-even financial model of the business venture is developed based on all costs associated with taking the product from idea to market and achieving sales sufficient to satisfy debt or investment requirements.

If the system wants to develop features, then it may conduct the feasibility study, which will help it in determining whether a system needs to be developed and updated or not.

Economic Feasibility is an assessment of the case of system model, cost structure, revenue streams, economics on a unit basis, and development and Updated of a system. This process was aimed at determining if there was a system design that could generate a net economic return above program and transaction costs.

Development Cost:

Personal Cost

TABLE 1: PERSONAL COST

<u>Role</u>	<u>Cost per hour</u>	<u>Hours</u>	<u>Total cost per hour</u>
-------------	----------------------	--------------	----------------------------

<b>1 System Analyst</b>	50 JOD	20 Hours	<b>1000 JOD</b>
<b>1 System Administrator</b>	20 JOD	24 Hours	<b>480 JOD</b>
<b>3 Programmer</b>	30 JOD	90 Hours	<b>2700 JOD</b>
<b>1 GUI designer</b>	15 JOD	18 Hours	<b>270 JOD</b>
<b>1 Database Specialist</b>	17 JOD	14 Hours	<b>238 JOD</b>
<b>Total</b>			<b>4,688 JOD</b>

New Hardware and Software cost:

TABLE 2:HARDWARE AND SOFTWARE COST:

<u>Hardware &amp; Software</u>	<u>Cost</u>
<b>1 phone</b>	<b>200 JOD</b>
<b>1 DBMS Software</b>	<b>500 JOD</b>
<b>1 Development Server</b>	<b>800 JOD</b>
<b>Total</b>	<b>1500 JOD</b>

Total Development Cost = 4688 + 1500 = 6188 JOD (For Development Year).

Operating Cost:

TABLE 3:OPERATING COST

Name	Cost
<b>Hosting server</b>	300 JD
<b>Programmer</b>	2,000 JD
<b>System Update and Enhancements</b>	1,000 JD
<b>Device Maintenance</b>	700 JD

**Total = 4,000 JD**

Benefits:

**TABLE 4: BENEFITS**

<b><u>TANGIBLE BENEFITS WORKSHEET: Year 1 – 5</u></b>	
<b>1. Error reduction</b>	2,400 JOD
<b>2. Increased flexibility</b>	3,000 JOD
<b>3. Increased speed of activity</b>	1,700 JOD
<b>4. Improvement in management planning or control</b>	4,500 JOD
<b>Total Tangible Benefits</b>	11,600 JOD

➤ **Intangible Benefits:**

- Improve user satisfaction.
- Good reputation and image.
- decreases in the amount of employee time needed to complete specific tasks.

1.3.4 Schedule Feasibility

TABLE 5: SCHEDULE FEASIBILITY

	<b>Task</b>	<b>Start Time</b>	<b>End time</b>	<b>Duration</b>	<b>Dependencies</b>
1	Gather information and initiate project	18/3/2023	21/3/2023	4	-
2	Study the feasibility of the project	23/3/2023	27/3/2023	5	T1
3	Prepare a project management plan	28/3/2023	31/3/2023	4	T1,T2
4	Define requirements specifications	1/4/2023	7/4/2023	7	T3
5	Design system architecture	8/4/2023	11/4/2023	4	T4
6	Prepare context diagram	12/4/2023	17/4/2023	6	T4
7	Drawing diagram 0,1	18/4/2023	22/4/2023	5	T6

<b>8</b>	Define data Dictionaries	23/4/2023	26/4/2023	4	T4
<b>9</b>	Define process specification	27/4/2023	30/4/2023	4	T4
<b>10</b>	Do the structured decision analysis	1/5/2023	2/5/2023	2	T4
<b>11</b>	Draw ERD	3/5/2023	7/5/2023	5	T9
<b>12</b>	Design graphical user interfaces	8/5/2023	17/5/2023	10	T5
<b>13</b>	Normalize Database	18/5/2023	20/5/2023	3	T12
<b>14</b>	Make User Manual	21/5/2023	25/5/2023	4	T13

#### 1.3.5 Legal Feasibility

The legal requirements the study to know if the proposed project confirms the legal and ethical requirement and, in our project, the proposed system is completely ok with the legal and ethical terms it does not take not legal things form any existing copyright, and it is such an ethical system too.

#### 1.4 Recommended Solution and Expected Project Deliverables

We expect this application to help JU students by offering them different functionalities in the app that is connected to a database. Student can search for books, report a problem, see announcements and more. Moreover, employee will post the announcements and monitor books in the library. Also, requirements specifications are shown in details. The expected project delivery will be with deadline and the system will be divided into tasks until its done.

## 1.5 Local and Global Impact of the Proposed Solution

Provide a better experience for JU students and make them more satisfied with the functionalities that the university offers. Also, will help students to save their time.

Developing a system like JU Library will be a technological innovation, and this will help raising JU, and brining JU more opportunities because JU has many partners.

## 2.0 Project Management plan

### 2.1 Project Organization

Project organization refers to the style of coordination, communication, and management the project team uses throughout a project lifecycle.

Project manager uses project organization to align team members before and during a project. The process minimizes disruption to your workflow and conflict among team members, as well as leads to maximum productivity among team members involved in a project.

### 2.2 Roles and Responsibilities

TABLE 6:ROLES AND RESPONSIBILITIES

Role	Responsibilities
Project Manager	<b>The project planner how is responsible for coordination</b>
Software developers	<b>Developing JU Library app based on the requirements</b>
UX/UI Designers	<b>Design for a user experience that will let students have a great feedback after using it</b>

System Analyst	<b>Understanding requirements and validating them and translating them form business to technical specifications</b>
----------------	--

## 2.3 Software Process Model

The process model that we will be following is waterfall Plan-Driven (PDD) where we will be planning and developing all the features a user might want or need in the final application and determining how all those features are to be developed. The whole plan is based on the execution of an ordered set of task-specific levels. We have limited requirement that is does not change.

## 2.4 Tools and Techniques

Laptops  
Canva  
Microsoft word

## 2.5.Project Tasks

### 2.5.1 Task Description

In the table below.

### 2.5.2 Deliverables and Milestones

We are following waterfall software process so we will have only deliver the project at the end

### 2.5.3 Resources needed

In the table below.

### 2.5.4 Dependencies and Constraints

#### **Dependencies**

In the table below.

#### **Constraints**

- 1)data management constraint
- 2)communications constraints like not understanding requirements well

## 2.6 Assigning Team Members to Tasks

This table will explain 2.5.(1,3,4,6).

**TABLE 7:TASKS TABLE**

<b>Number</b>	<b>Task Description</b>	<b>Milestones</b>	<b>Needed Resources</b>	<b>Task Assignees</b>
<b>1</b>	<b>This include a hole project overview and defining issues, objectives, requirements, and constraints</b>	<b>-</b>	<b>1)good writing skills. 2)google meet platform</b>	<b>Aman</b>
<b>2</b>	<b>Make technical, operational, economical, legal feasibility and schedule feasibility</b>	<b>M1</b>	<b>a skilled analyst. Spreadsheet like Microsoft excel</b>	<b>Lara, Aman</b>
<b>3</b>	<b>This include controlling the project and showing tasks and assigning team members to tasks</b>	<b>-</b>	<b>Team approval for the plan</b>	<b>all</b>
<b>4</b>	<b>Identify system stakeholders, doing an interview and a questionnaire. User/functional/nonfunctional requirements</b>	<b>M2</b>	<b>Google forms</b>	<b>all</b>
<b>5</b>	<b>Show system components</b>	<b>M3</b>	<b>-</b>	<b>Aman</b>
<b>6</b>	<b>It shows the entire system with the external entities</b>	<b>-</b>	<b>a</b>	<b>Lara</b>

<b>7</b>	<b>Level 0 is an explosion of the context diagram and it has more details, and after that process is exploded at level of diagram 0</b>	<b>M4</b>	<b>a</b>	<b>Lara</b>
<b>8</b>	<b>This include creating dataflow tables and data stores and showing data structures and data elements</b>	<b>M5</b>	<b>-</b>	<b>Yara</b>
<b>9</b>	<b>This includes showing specifications of processes</b>	<b>-</b>	<b>-</b>	<b>Saja</b>
<b>10</b>	<b>Using decision tables</b>	<b>M6</b>	<b>Microsoft word</b>	<b>Saja</b>
<b>11</b>	<b>Show system entities in tables and show the relations between them</b>	<b>-</b>	<b>Smart draw app</b>	<b>Aman</b>
<b>12</b>	<b>High fidelity prototyping for user interfaces</b>	<b>-</b>	<b>Canva platform</b>	<b>Shadan</b>
<b>13</b>	<b>Removing data redundancy and generating 1NF,2NF,3NF</b>	<b>M7</b>	<b>-</b>	<b>Shadan</b>
<b>14</b>	<b>Screenshots that shows how to use JU Library app</b>	<b>M8</b>	<b>-</b>	

## 2.7 Project Schedule (Gantt chart and PERT diagram)

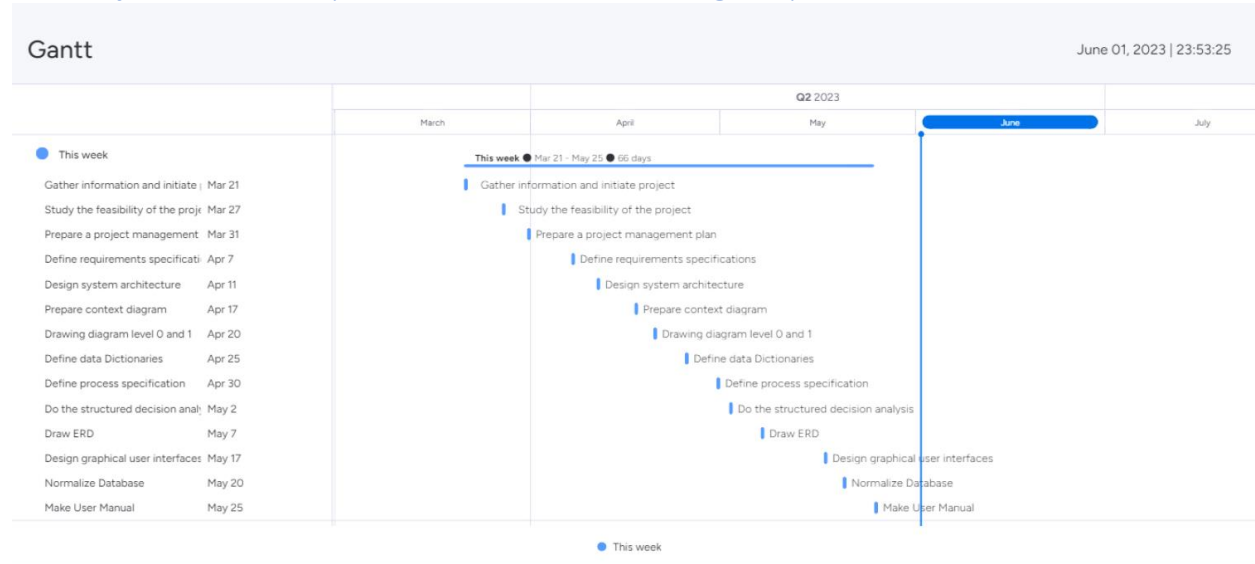

FIGURE 1: GANTT CHART

### PERT Diagram

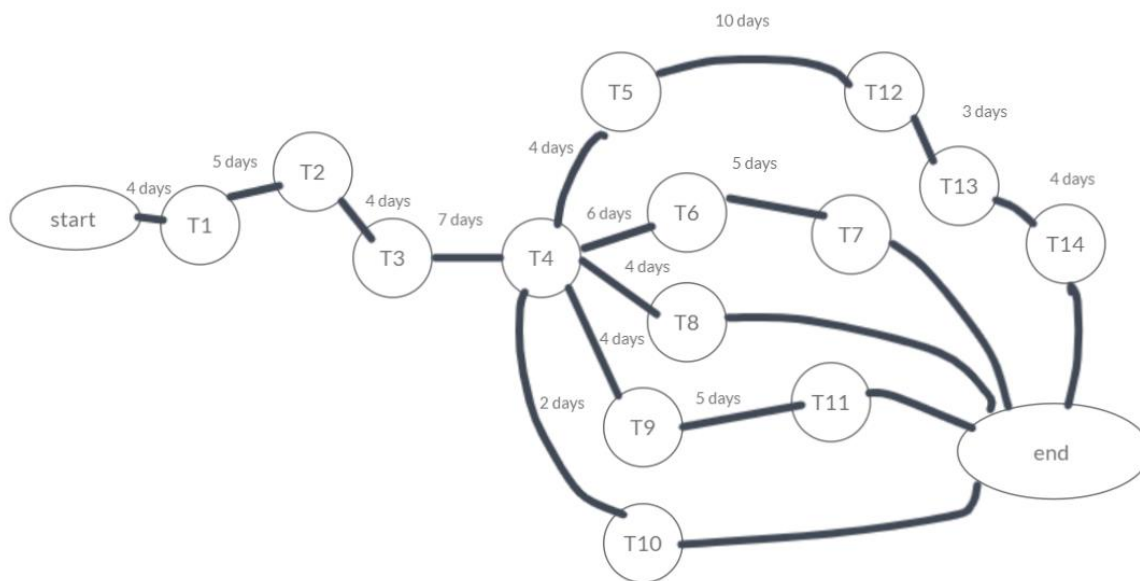

FIGURE 2: PERT DIAGRAM

## 2.8 Monitoring and Controlling Mechanisms (EVM and Schedule Expediting)

TABLE 8:EVM STUDY TABLE

Task	Estimated cost	Cumulative estimate	Estimated duration	Stage completed	Actual cost of task to date	Actual cost of project to date
Task 1	3000	3000	4 days	100%	3000	3000
Task 2	1000	4000	5 days	100%	3000	4000
Task 3	1000	5000	4 days	100%	1000	5000
Task 4	3000	8000	7 days	100%	3000	8000
Task 5	9000	17000	4 days	100%	9000	17000
Task 6	3000	30000	6 days	100%	3000	30000
Task 7	3000	33000	5 days	18%	3000	33000
Task 8	3000	36000	4 days	0%	Not yet begun	Not yet begun
Task 9	12000	42000	4 days	0%	Not yet begun	Not yet begun
Task 10	15000	57000	2 days	0%	Not yet begun	Not yet begun

Task 11	3000	61000	5 days	0%	Not yet begun	Not yet begun
Task 12	4000	65000	10 days	0%	Not yet begun	Not yet begun
Task 13	5000	70000	3 days	0%	Not yet begun	Not yet begun
Task 14	5000	7500	4 days	0%	Not yet begun	Not yet begun

**At the end of task 7:**

$$p = (100+100+100+100+100+100+18) / (100+100+100+100+100+100+100)$$

$$= 0.88$$

$$\mathbf{EV} = P_v * p$$

$$= 33000 * 0.88$$

$$= 29040$$

$$\mathbf{CV} = EV - AC$$

$$= 29040 - 33000$$

$$= -3960$$

$$\mathbf{SV = EV - PV}$$

$$= 29040 - 33000$$

$$= -3960$$

$$\mathbf{CPI = EV / AC}$$

$$= 29040 / 33000$$

$$= 0.88$$

$$\mathbf{SPI = EV / PV}$$

$$= 29040 / 33000$$

$$= 0.88$$

$$\mathbf{ETC = (BAC - EV) / CPI}$$

$$= (75,000 - 29040) / 0.88$$

$$= 52227.27$$

$$\mathbf{EAC = AC + ETC}$$

$$= 33000 + 52227.27$$

$$= 85227.27$$

**Which is significantly more than the 75,000 we originally budgeted for.**

### Expediting:

Path 1 → T1+T2+T3+T4+T5+T12+T13+T14 → 4+5+4+7+4+10+3+4= 41 (CRITICAL PATH)

Path2 → T1+T2+T3+T4+T6+T7 → 4+5+4+7+6+5= 31

Path 3 → T1+T2+T3+T4+T8 → 4+5+4+7+4=24

Path 4 → T1+T2+T3+T4+T9+T11 → 4+5+4+7+4+5=29

Path 5 → T1+T2+T3+T4+T10 → 4+5+4+7+2=22

TABLE 9: TASK SCHEDULE

Activity	Estimated Duration(Days)	Crash Time	Cost/Week

- 3)Library administration
- 4)System analyst
- 5)System Developers

#### **Requirement Sources:**

- Gathering feedback through interviews and Questionnaire
- Collaborating with students to understand

## 4.2 Information Gathering Techniques

### 4.2.1 Interviews

WE have met one of employees in JU library and ask him the following questions and this is was his answered

1. What are the main goals and objectives of the university library?

The main goals are to provide access to a wide range of information resources, support research and learning activities, and facilitate knowledge dissemination among students and faculty.

2. How do you currently manage and organize your library resources?

We use a library management system that includes cataloging, classification, and indexing of materials. We also have physical shelves and sections designated for different subjects or categories.

3. What are the most significant challenges or pain points faced by the library staff and users?

Some challenges include difficulties in locating specific resources, managing overdue materials, ensuring timely returns, and effectively communicating updates and announcements to library users.

4. Can you provide insights into the types of library resources most frequently used by students and faculty?

Commonly used resources include academic journals, textbooks, reference books, research papers, e-books, and multimedia materials such as DVDs or online streaming platforms.

5. How do you handle the process of borrowing and returning books or other materials?

Currently, we use a manual check-out system where users fill out paper forms, and library staff manually stamp the due dates. Returns are processed by staff who verify the condition of the materials and update the records accordingly.

6. Are there any specific features or functionalities you would like to see in a library application?

It would be helpful to have features such as an online catalog with advanced search capabilities, personalized user accounts, automated reminders for due dates, and the ability to reserve or renew materials online.

7. Are there any particular requirements or restrictions related to data privacy and security?

We prioritize data privacy and security to protect our users' personal information and library records. Any library application would need to comply with relevant data protection laws and implement robust security measures, such as encrypted data transmission and secure storage protocols.

8. How do you currently measure and evaluate the effectiveness of library services?  
We use a combination of methods, including user surveys, feedback forms, and usage statistics. We also conduct periodic assessments to measure the impact of library services on student learning outcomes, research productivity, and overall user satisfaction.

9. Are there any integration needs with existing library systems or databases?  
We have an existing library management system that handles cataloging, circulation, and resource management. Any new library application should be able to integrate with this system to ensure seamless access to library resources, synchronized user data, and efficient workflow management.

#### 4.2.2 Questionnaires

Rate your experience using the library website

 Copy

### 4.3 User Requirement Definition (you can draw use case diagrams)

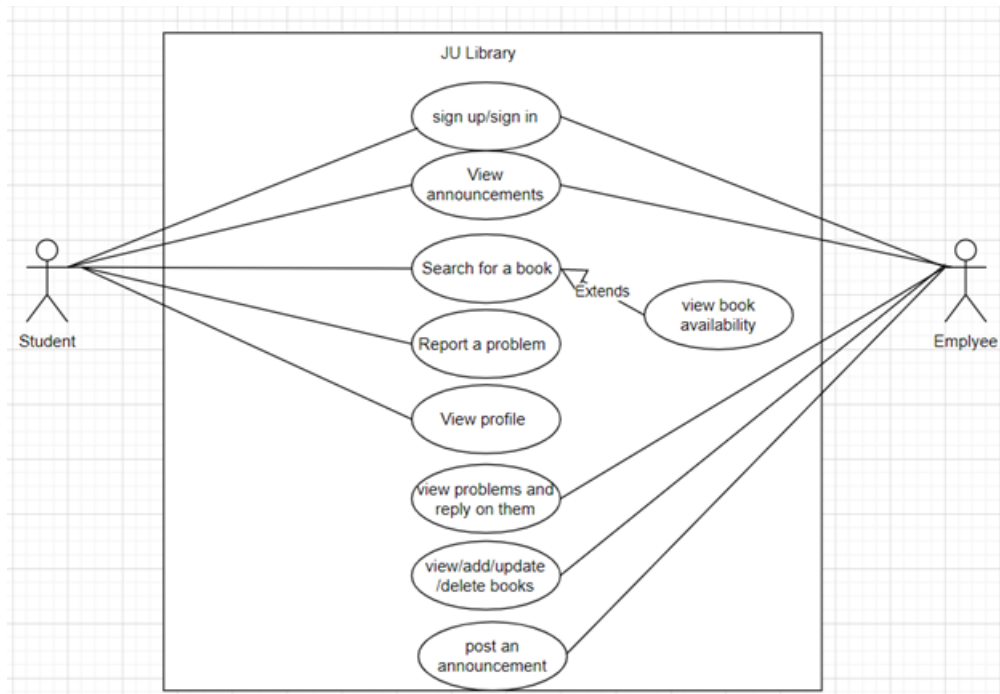

FIGURE 10:USE CASE DIAGRAM

## 4.4 System Functional Requirement Specifications (you can create use case scenarios)

User requirements:

1. Student
  - Log in: student login into the system using the same username and password that they take from university.
  - Log out: students can log out of the system by pressing the “Sign Up” button to end their session.
  - Search: Students can search for the book through the search box by many keywords
  - Report a problem: Students can report problems they encounter while using the application.
2. Employee
  - Log in: employee login into the system using the same username and password that they take from university.
  - Log out: employees can log out of the system by pressing the “Sign Up” button to end.
  - Add/delete/update book: employee can modify the books.
  - Post announcement: employee can post announcement for student about anything it related to books.

System requirement

1. The application shows the books available in the university in all their classifications.
2. The application allows the student to record the problems.
3. The application shows announcements firsthand so that the student is kept abreast of the latest developments.
4. The application allows the employee to modify books and post announcements to students.

Use case specification:

1. Login: The student can log into the system by entering their full name and password. If the user forgets his password, he must reset it from the university's self-registration website.
2. Search box: The student can search for the book he wants in several ways, such as searching for it through the name of the book, the author, the date, and others.
3. Reporting a problem: The student can report any problem he encounters with the application and send it to the staff responsible for seeing the reports, responding to them and solving the problem.
4. Add/delete/update books: The employee can delete, modify and update the books of the library
5. post announcement: The employee can announce any new updates related to the library and books, and it will appear on the student's interface.

#### 4.5 Non-Functional Requirements

- 1)Security: Secure authentication methods, where only authorized people can access the system securely.
- 2)Performance: system should perform well and fast.
- 3)Usability: a user friendly application and easy to use.
- 4)Reliability: System should be reliable as possible and without error.
- 5)Availability: System must be available any time.
- 6) Portability: easily adapted on different operating systems.

#### 4.6 Data Requirements

Data that must be collected:

- student data
- book data
- employee data
- announcements data
- reported problem data
- data about data

## 5.0 System Analysis and Design

### 5.1 Architecture Design

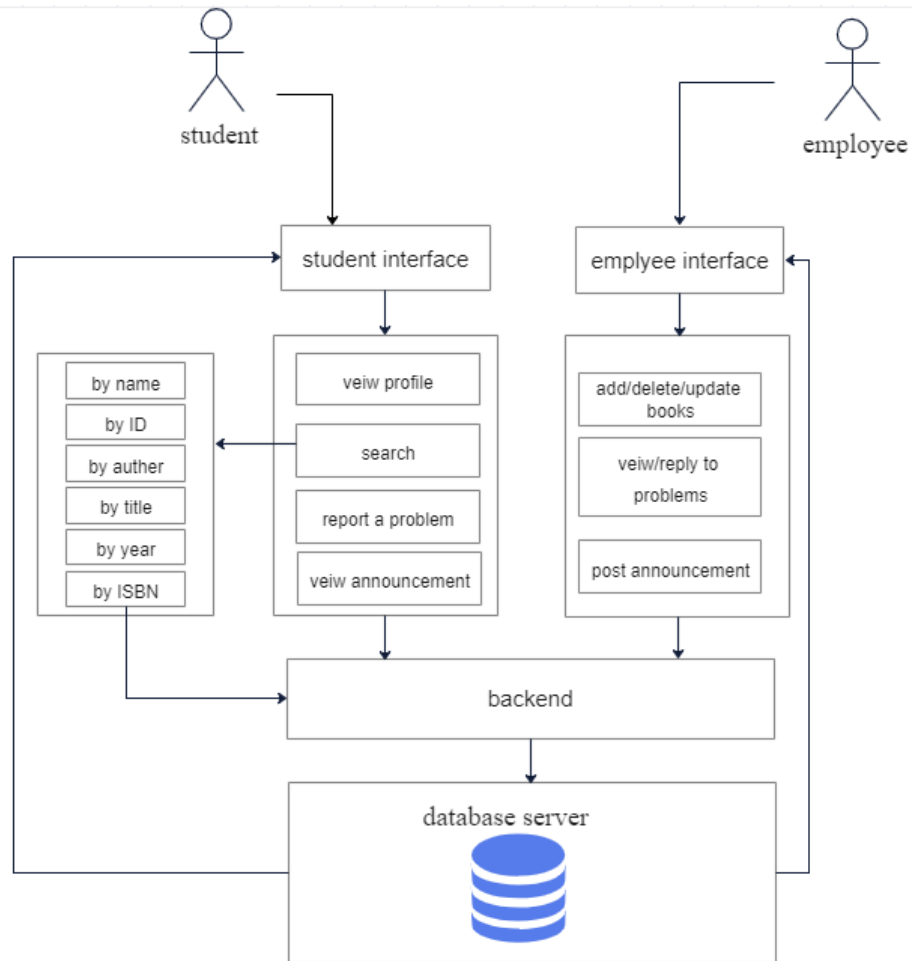

FIGURE 11: ARCHITECTURE DESIGN

## **5.4 Process Specification and Structured Decision Analysis**

### **User Registration and Login:**

Users can create an account by providing their relevant information.

Users can log in to the application using their registered credentials.

### **Book Search and Availability**

#### **Book Checkout and Return:**

Users can check the availability status of a book.

If the book is available, users can request to check it out.

The application will update the book's availability status and assign it to the user.

### **Library Announcements:**

Users can view important announcements and updates from the library.

The application will display notifications for new announcements.

### Reporting Problems:

Users can report any issues or problems they encounter in the library through the application.

The application will provide a form or interface for users to submit their reports.

Library employees can review and address the reported problems.

Library employees can log in to the application with their own credentials.

Employees can add new books to the library by providing relevant details.

Employees can delete books from the library if necessary.

### Structured Decision Analysis:

#### Book Availability:

Decision: Determine the availability status of a book.

Criteria: Check if the book is currently checked out or available for borrowing.

Alternatives: Available, Checked Out.

Decision Rules: If the book is not checked out by any user, it is available; otherwise, it is checked out.

#### Book Checkout:

Decision: Add a new book to the library.

Criteria: Validate the book information and check if the book already exists in the library.

Alternatives: Add, Reject.

## 6.0 User Manual

### A. Student Login:

Start the app by clicking on the 'start' button that will take you to the login page. type in your student ID and password that matches the university website, then click on 'Login'.

### B. Home Page:

Here you'll get the latest announcements, and you can go to your profile by clicking the profile icon on the right below or report a problem to the staff by clicking on the specified button on the left. You can search for any book/author you want by clicking on the search bar.

### C. Search Engine:

After typing in the name of the book you want, a list of the books that the library have that match your search will appear, showing their cover, name, author name and ratings. It will also show you the availability of the book, so if someone else has borrowed it already, it will say that the book is unavailable at the moment.

### D. Report a Problem:

If you have a problem or a suggestion you would like to report, or simply a book you would like to request, type it in the box below, and then click on the 'report your problem' button.

### E. Profile Page:

Here, you get to see your personal information, like your name, major, and profile picture. You also get to see a list of all the books you borrowed, and a list of the reports you sent in the past.

### F. books you borrowed.

after clicking on the 'books you borrowed' button, you'll be referred to a list of these books with all the information you'll need about each book, including the date when you borrowed it, when it should be returned, and the remaining days.

### G. your reports

after clicking on the 'your reports' button, you'll be referred to a list of all the reports you've ever sent in the past along with the date.

## 2. A. Staff Login:

if you're an employee, you can log in by entering your phone number and password and then clicking the 'Login' button.

### B. Home Page:

Here, you can post an announcement yourself and view the previous ones shared by you or other staff. Below that, you get to see recent reports that got sent by students. Staff members have the ability to add new books to the application's library, and they can also search for any book/author they want by clicking on the search bar.

#### C. Search Engine:

after typing in the name of the book you want, a list of the books that the library have that match your search will appear, showing their cover, name, author name, and ratings. It will also show you the availability of the book, so if a student has borrowed it already, it will say that the book is unavailable at the moment.

#### D. Edit a Book:

you can edit any book by clicking the pen icon next to that book's cover, and then it will refer you to a page where you get to change the book's information, like its name, availability, etc. You can also delete the book completely by clicking the trash can icon.
